### **DETAILED ACTION**

This is an Office Action allowance on the merits in response to communications filed by Applicant on November 12, 2009. Claims 21-42 are addressed below.

#### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on November 12, 2009 has been entered.

### **EXAMINER'S AMENDMENT**

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Stephan A. Pendorf (Reg. No. 32,665) on January 25, 2010.

The application has been amended as follows:

Regarding claim 21, line 8 has been amended from "a control unit (70) for actuating" to --a control unit (70) configured to actuate--.

Regarding claim 33, line 9 has been amended from "a control unit (70) for actuating" to --a control unit (70) configured to actuate--.

***Statement for Allowance***

3. The following is an examiner's statement of reasons for allowance: The two closest pieces of prior art are JP-A-2001-159518 (submitted by Applicant in on 10/21/2009) and Rau (6,883,532). JP-A-2001-159518 uses inclination sensors on the arms, but is directed to a digger rather than a slew. This results in the reference's failure to disclose a few claimed limitations, namely "a mast base (21) rotatable about a vertical axis (13) on a chassis (11)" and "three mast arms".

Further, it is questionable whether or not JP-A-2001-159518 discloses "a coordinate transformer ... that responds to ... measured angular values that are determined by means of angle sensors (44 to 48) on the mast arms (23 to 27) for translation into articulation axis referenced movement signals". The reference does not go into such detail, but only discloses supervising the work machine posture on the basis of the link-angle sensors (paragraph [0034]), drive commands to achieve a desired angle [0046], and that the sensors can be tilt sensors ([0079]). Supervision though drive commands based on tilt sensors may or not entail "a coordinate transformer ... for ... translation into articulation axis referenced movement signals".

With regard to the Rau reference (6,883,532), the angle sensor on each of the arms do not determine earth referenced angle sensors but rather are sensors that directly detect the angular distance between each arm. Separately, a tilt sensor is

shown in item 94 of Fig. 2, which Applicant persuasively argues is used merely for purposes of determining drift and is neither for coordinate transformation amongst all three of the arms nor disposed on the mast arms away from the articulation axis.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
